=== When you start editing a block in your project, you are presented with a dialog box which shows the current version of the block, the version you are editing and a preview image of the block as it will appear in your project (click the preview image to see the block as it will appear in your project). This dialog box is only displayed when you are editing a block that contains blocks or a block inside of another block. One of the major uses of this tool is to edit the `Templates` block. When you save a template that was created in this way, the blocks in the new template are changed. Each block is edited separately. This plugin makes it easy to edit a block by selecting it in the list and then editing the block's properties. This plugin also supports the following: - Resizing non-uniformly scaled blocks - Opening and closing nested blocks as a dialog box - Editing existing blocks - Opening and closing nested

blocks as a dialog box - Changing BlockLayer This plugin is a part of the Rhinoceros 5 Plug-ins Collection.

Image Resource Forum More Like This Artist's Description At times, I snap a photo of just some patch of drab grass. I do not give much thought to what the photo may or may not become. I frequently post the image on one of the social networking sites, and ask friends to share their comments or help complete the photo by filling in the rest of the image. My friends always have suggestions, and the result is usually quite cool. The grass is so flat and drab, and the photo was taken on top of a winding country road that is just at the point of being a dirt road. All I could see was the slight

curves of the road in the distance. I snapped the photo of the flats of grass on a country road just after the road had been plowed. The sun was streaming down on the grass and was warm enough to heat the grass even though it was really October in Maine. This is yet another example of how the colors of nature change according to the season.
