AutoCAD is capable of creating 2D and 3D drawings, as well as parametric modeling (for which it is best known). Use AutoCAD to perform Computer-Aided Design (CAD) tasks. Many industries use AutoCAD to design and engineer objects such as automobiles, airplanes, bridges, buildings, boats, gear, and turbines. The basic intent of AutoCAD is to help you create, modify, and view 2D and 3D drawings of any conceivable shape. Also, AutoCAD can help you modify the parameters of existing drawings. In its simplest form, AutoCAD draws objects on a drafting paper, which can then be transferred to a computer to be stored as a digital image file. In the beginning of the 1980s, AutoCAD was widely used for architectural and civil engineering drafting. Engineers could create accurate 3D models of buildings from 2D drawings using the technology of computer-aided design. AutoCAD could draw any shape (line, curve, spline, polyline, polycurve, arcs, circles, etc.) with any number of points and control the number and the weight of lines that connect these points. Nowadays, AutoCAD is used for much more than just simple drafting, and it is primarily used for engineering and architecture. Also, AutoCAD has become the industry standard for creating electrical, mechanical, and architectural designs. AutoCAD Key features Create, design, and modify drawings and diagrams. The Autodesk Navisworks software creates and edits meshes, splines and surfaces and provides a number of features to facilitate the creation of advanced models. Autodesk describes Navisworks as a suite of programs, but it is primarily a single-user CAD program used for architectural, site, and infrastructure design. Navisworks allows users to make 3D models of buildings and landscapes, as well as set topologies of surface features such as roofs and walls. Navisworks includes a modeling tool, called "Ribs" which was used for creating ribs, one edge of the roof or walls of the building. Autodesk is planning to integrate the "Ribs" tool into AutoCAD in the future. Total Station is a portable theodolite, laser distance meter and GPS receiver. The device is portable, allowing easy measurements in remote locations. History The current product offering from Autodesk is a core suite of three software packages: AutoCAD, AutoCAD Architecture and AutoCAD LT. There are also a number of other Autodesk products available through OEM partners. Originally, AutoCAD was licensed through X-Y-Plate Corporation. The first version of AutoCAD was released in 1984 and the first commercial product was Autocad 2000. AutoCAD LT was developed for use in high school and college classrooms. It contains AutoCAD student editions, such as AutoCAD Grades and AutoCAD Construction. In 1999, Autodesk began a new design strategy which has since brought a number of new products to market, including the software package Autocad Architect, Inventor and MEP applications. Autocad Architecture and Autocad Civil 3D were both discontinued on 8 March 2009. On 28 March 2009, Autodesk announced the purchase of SketchUp from Google. SketchUp, a product which was a Google Web Services product, was developed by Keyhole, Inc. On 11 July 2009, Autodesk announced a rebranding of its model making software. New products include Navisworks, Fusion 360, Allegorithmic Substance Designer, SketchUp Pro, and Alias. On 4 February 2011, Autodesk launched a new web-based video editor in beta called Media Composer. In May 2011 Autodesk launched an updated version of Autodesk 3ds Max in which they combined the functionality of 3ds Max and Maya into a single software. 5b5f913d15

Wintering mammals have pronounced physiological adaptations to survive in low ambient temperatures. Cardiovascular, immune and skeletal systems are affected by the long-term hypoxia, cold, and nutrient deprivation. We studied the status of protein synthesis and ribosome biogenesis in the heart, skeletal muscle, liver and kidney in ground squirrels during the hibernation season. We found that mRNA, protein and ribosome levels were severely reduced in all tissues tested. In addition, a significant decrease in the protein synthesis rates was observed in the heart, liver and kidney. The number of ribosomes synthesizing proteins was decreased in the heart, liver and kidney, whereas in the skeletal muscle the number of ribosomes was unchanged. We propose that the decrease in ribosome synthesis rates and rRNA levels might be responsible for the cellular depletion of proteins and other components required for protein synthesis during hibernation and anemia of hibernation./* * Licensed to the Apache Software Foundation (ASF) under one or more * contributor license agreements.
