Polymap Crack + Activation Key 2022 [New]

PolyMap is a desktop mapping application that will allow you to use own data to customize the sample maps supplied with the software. Use the built-in spreadsheet to enter data or paste it from other Windows applications. Alternatively, you can use the import feature to bring in data from external spreadsheets, text, or database files. The Map Presentation Wizard gives you a step-by-step process to customize your map and the map's legend. Any data in a spreadsheet column may be utilized for labeling. You may use a set of geographic layers in different formats (state and county boundaries, five-digit ZIP codes, U.S. and state highways, cities, rivers, and lakes) to add details and create your new thematic map. For instance, state and county boundaries can be "extruded" to 3D prisms, shaded in color, "sprayed" with a dot-density distribution, embedded with individual pie and bar charts, or placed into a matrix for portfolio analysis. New custom point layer can be added to the maps. Maps and spreadsheets may be printed with any Windows-compatible printer. Maps can be exported to Bitmap format (.bmp) enhanced Metafile (.emf) and JPEG (.jpg). PolyMap send JPG Bitmaps of the maps as attachment, to any e-mail address using MAPI compatible e-mail clients like Outlook Express or Netscape Communicator. Location: St. Louis, Missouri, United States License: Freeware Platform: Windows Language: English Size: 9.63 MB Date Added: 05/09/2003 Publisher's Description: Map-It is the latest addition to Total Explorer's robust set of map editors. Simply drag and drop your data on the spreadsheet and let Map-It do the rest. Within minutes, Map-It will create a map and legend specific to your needs. Map-It is very simple to use and requires no training. Anyone can quickly and easily create professional quality maps within minutes. Map-It creates highly detailed, interactive maps of your data, which you can easily customize. Polymap With License Key

Print professional, custom, digital maps using your own data. An integrated spreadsheet enables you to enter your data and use your own map legends, data labels, custom thematic maps, and other customizations. Updating is easy. Use the Excel import feature to bring in your existing data or paste a map of your choice from a website or another Windows application. Any data in a spreadsheet column may be utilized to label your map and add details. Data labels, with column locations, can be added to your map and map titles and legends. A series of map legends describing each layer can be prepared in the form of a file you can import into the program. Data labels, attributes, attributes, and other customizations may be transferred to and placed on your map. Use the Map Presentation Wizard to customize the appearance of your map and map legends. Paint your map using any favorite paint program or image editor. Maps and spreadsheets may be printed with any Windows compatible printer. Data Types: Cel-Rect | Numeric | Numeric | Short Text | Long Text | Text | Bar and Pie | Radius | Point Imports: Excel, csv | Bin File Features: Excel Import Custom Maps Map Legend Uses Excel for Data Data Label Spatial Data Print and Export Metafiles Link Spreadsheets Uses GeoSpatialLite for data Print and Export Metafiles Link Uses proprietary binary format for data Print and Export Metafiles Link Uses Geosofts spatial data format Print and Export Metafiles Link Uses proprietary binary format for data Print and Export Metafiles Link Accepts GPS coordinates Print and Export Metafiles Link Prints maps in stereo view Print and Export Metafiles Link Prints maps in true color Print and Export Metafiles Link Prints maps in true color Print and Export Metafiles Link Prints maps in true color Print and Export Metafiles Link Prints maps in 3-D models Print and Export Metafiles Link Print

What's New In Polymap?

PolyMap is a desktop mapping application that will allow you to use own data to customize the sample maps supplied with the software. Use the built-in spreadsheet to enter data or paste it from other Windows applications. Alternatively, you can use the import feature to bring in data from external spreadsheets, text, or database files. The Map Presentation Wizard gives you a step-by-step process to customize your map and the map's legend. Any data in a spreadsheet column may be utilized for labeling. You may use a set of geographic layers in different formats (state and county boundaries, five-digit ZIP codes, U.S. and state highways, cities, rivers, and lakes) to add details and create your new thematic map. For instance, state and county boundaries can be "extruded" to 3D prisms, shaded in color, "sprayed" with a dot-density distribution, embedded with individual pie and bar charts, or placed into a matrix for portfolio analysis. New custom point layer can be added to the maps. Maps and spreadsheets may be printed with any Windows-compatible printer.
