"Hard water" is common in Boerne TX. This causes blemishes, calcium deposits, blemishes and many other problems. All water contains dissolved minerals ... which can be divided into two categories: natural minerals and artificial minerals. In its natural state, water contains only two types of minerals: calcium and magnesium. Natural minerals are needed in the body for bone formation, but they do not contain calcium. All solid minerals that can be used by the body are found in water in the form of various types of calcium and magnesium carbonate, known as "hard water".
