The original Hard Disk-based ROLAND VS2480 includes a new proprietary partition table structure for the operating system. This allows multiple partitions to be run in tandem without interference from other partitions. Partitioning the hard disk allows each operating system to have its own storage place with plenty of room for add-on programs or even user-installed music. The Roland Partition Shuffler Activation Code application makes it simple to make a bootable flash drive that can be used for booting any of the VS2480's partitions from any computer. This makes the running of Roland's own music software, or any other OS software, easy and convenient. There are no driver problems or compatibility issues and the whole program is standalone, using no other programs. The software program is similar to playing a vinyl record or CD from a single track. The program is meant to enable the easy communication between each partition and other types of Operating Systems. It allows both Windows and Mac OS software to communicate with one or more Roland's own software installations. Benefits Of The Roland Partition Shuffler: The unique and proprietary partitioning that Roland developed to work within its own VS2480 is already installed on the Hard Disk of the VS2480. Therefore, there is no need for extra HD space or any other extra software. The program emulates the installation and setup process of the Roland partition scheme automatically. The program provides a simple button to allow the user to choose which partition(s) will be available for both Windows and Mac OS computer users. The software supports the Hard Disk partition in any Windows OS, including Windows 7, Vista, and Windows XP, and Mac OS X, including Leopard and snow Leopard. What's New in This Version: Added the ability to load a flash drive into the hard drive of a PC system. What's New in Previous Version: Fixed the program so that it will boot the memory card partitions in lieu of the flash drive if you choose that configuration. Note : This Roland Partition Shuffler program enables the user to easily select the specific partition from Roland's VS2480 hard disk to be booted when the computer is booted. Each hard disk partition has a unique partition number assigned to it. Each partition is mapped to a specific file path of the Hard Disk of the Roland VS2480. With the partition being set to boot when the computer is booted, the user is able to access the Hard Disk with each specific partition without worrying about another partition's interference.

Roland Partition Shuffler is a utility that is developed for Roland VS2480 users who want to choose which partitions should be visible when they boot up another Operating System. It provides a screen which displays a list of partitions on the Roland VS2480 hard drive. It enables a user to choose which partitions should be visible when the OS is booted. At run time, the partitions are dynamically remapped to the new location. There are two ways to use the application: (1) choose "New Digital Studio" from the list of your Operating System and create a partition on your existing Roland ASIO or Aptio drive that will host all of your Roland software; (2) choose "New Aptio Drive" from the list of your Operating System and install Roland software to the newly created partition using your Roland ASIO software. You are responsible for giving the proper permissions to the partitions selected to "mount". If you select "New Aptio Drive" and set up an Aptio partition, the application will install Roland music software on that partition.

Roland Partition Shuffler Features: - Provides a screen that lists the Roland hard drive partitions available to you. - Will determine the name of the partition, and it will list the partitions that belong to the main hard drive, and can be found on the same drive as the Aptio partition being created. - Allows you to choose which partitions to expose to the user and their corresponding mount point. - Supports both a 1:1 mapping as well as a 3:1 mapping when the ASIO software chooses the device settings for the new Aptio drive. - We supply the image for all of the needed software as pre-built ISO files. - Supports WIN32, WIN64, DOS and Linux. - Installs in 4 hours or less. - Possibility to choose any amount of partitions you want for Windows or Linux (per version). - Gets the job done! What's New In Roland Partition Shuffler?

Version 1.1 updates the VS2480 Driver's feature to allow the Shuffler Application to control the VS2480 as a multi-track sequencer, and offers some minor bug fixes, tweaks, and enhancements. Last year, in the last update to the EasyNet USB driver, "Roland - Partition Shuffler (RPS) for the VS2480", I added direct control of the VS2480 by RPS, as a minor side benefit of the program. This enhanced the capabilities for RPS users and added yet another tool they could use for another way to add MIDI data to the work being done in the RPS window. Since I'm now working with Roland's "VS2480 (v1) - User Manual (RPS = Partition Shuffler)" file for the manuals, I've been able to take the VS2480 / RPS interface and add more features to it, allowing users a more complete picture of the VS2480 as a multi-track sequencer. What's included? VS2480.001v1 - User Manual (RPS = Partition Shuffler) (2010-10-13) VS2480.001v1 (v1.1) - User Manual (RPS = Partition Shuffler) (2010-09-21) How does RPS work? Only RPS (v1.1) for the VS2480 (v1.1) will work properly for the VS2480. It also relies on a special version of the EasyNet USB driver (USBv2.3.1). In the case that you do not have the software, you can use the EasyNet USB driver that shipped with the VS2480 and the provided EasyNet USB user manual to get everything working. System Requirements: Windows 2000, XP, Vista, or Windows 7 on any x86 or x64 CPU At least 0.98.09 or newer of the EasyNet USB driver The "RPS" application, file version 1.1 Description: RPS will only work on the VS2480 if the sample rate is 48kHz or faster. How to install: 1. Download the EasyNet USB driver package that is appropriate for your hardware and operating system. 2. Download RPS (v1.1) from above and unzip the file to a directory
