Wayne Wolfgram: "10 Guns" Against U.S. Gun Control Summary: Gun laws in the United States have mostly not been changed since the mid-1960s. Instead, gun control advocates have shifted their focus to more mundane issues, while gun owners have shifted their focus to the Second Amendment. But there have always been

only 10 guns in the United States and, with the exception of so-called limited one-gun-a-month purchases, ownership of all 10 guns is still illegal. Wayne Wolfgram, a principal at the McLarty Associates firm in Washington, D.C., who writes regularly on the subject of Second Amendment rights, explains in this essay why the only thing that can save America from gun control advocates is the Second Amendment. The press would be abuzz with the latest national tragedy involving guns, crimes, and danger,

and gun control advocates and some lawmakers would put forth even tougher restrictions. The time had come to ensure that gun ownership is not only tolerated but legally protected so that the potential for mass shootings and other gun violence in our nation is kept at the lowest level. All sides of the discussion would again ask themselves, "Why do we continue to allow so many weapons to be in circulation?" With the exception of total prohibition on gun ownership, most gun laws have

remained unchanged since the mid-1960s, when Gen. Charles de Gaulle, the president of France, ordered a total ban on the ownership of handguns and rifles to eliminate rising armed robbery and assassination attempts. The Socialist government of Francois Mitterand had been mired in a power struggle with the far-right National Front. Gun-control proponents thought that such a move would bring peace to France, as well as to the world. Alas, this proved to be a tragic error. On Dec. 9,

1975, the National Front's Jean-Marie Le Pen staged a rally in Paris. He was joined by other far-right "small groups" and their supporters. The police were powerless to prevent the violence and bloodshed that ensued as they tried to break up the protests. During this time, thousands of weapons were seized by police. The anti-gun movement used this and other incidents as "smoking guns" to prove its point that the easy availability of guns in many countries is linked to high rates of murder and

suicide. Although such murders and suicides occur all over the

(a) Field of the Invention The present invention relates to a thermally-assisted magnetic recording head, and more particularly, to a thermally-assisted magnetic recording head that can improve the magnetic recording performance by depositing heat to media by applying a laser light, and a method of manufacturing the

same. (b) Description of the Related Art

Demand for a magnetic disk with high recording density is gradually increasing in accordance with development of an information-oriented society. Research for promoting the recording density of the magnetic disk is actively performed. One of the methods for promoting the recording density is to increase the coercivity of the magnetic recording layer. However, it is difficult to increase the coercivity of the magnetic recording layer, and thus, a

perpendicular recording method in which a magnetic field is applied to a perpendicular direction to the recording layer has been introduced. According to the perpendicular recording method, however, if the magnetic field is applied to the perpendicular direction to the recording layer, a demagnetization field is generated, and thus, it is difficult to record to a high-density surface. Therefore, a method of inducing a magnetic field in an in-plane direction by using a bias magnetic field to

the magnetic recording layer as a heat source for preventing thermal demagnetization of the magnetic recording layer has been introduced. A magnetic head for the perpendicular recording method is formed by a magnetic core and a coil disposed around the magnetic core. The coil emits a magnetic field to the magnetic recording layer through the magnetic core, and the magnetic field emitted from the coil heats up a part of the magnetic recording layer to record information. However, since

the magnetic field from the magnetic core is used in the magnetic head, it is difficult to precisely control the heating section of the magnetic recording layer. Further, a problem occurs that the side of the recorded data may be damaged during writing. Since a write magnetic field is applied to a magnetic recording layer with a short duration time, the magnetic recording layer is not heated enough to magnetize. Hence, to increase the coercivity of the magnetic recording layer, the magnetic head includes

a heating device in order to improve write performance. Also, in order to precisely control the heating section of the magnetic recording layer, it is necessary to precisely control the structure of the heating device. To this end, a method of precisely controlling the structure of the heating device by performing a process, such as cleaning, on a substrate before forming the heating device may be used. However, this method causes a problem of increasing
