## Vidis Pro Crack+ [Mac/Win] [Updated-2022]

Vidis Pro is an easy-to-use free camera surveillance software designed to allow you to monitor live video from a camera connected to a PC with a web browser. The camera can be set up so that images are uploaded to your server (via FTP, http or email) after a user specified interval (1 to 999 minutes) or when a specified movement is detected. Some key features of Vidis Pro:

- Supports most webcams, digital cameras and camcorders connected to a video capture card or an USB port
- Live images can be viewed in a web browser from any computer connected to the Internet
- Web browser view is automatically and periodically refreshed (selectable between 30 seconds and 10 minutes)
- Avoids unnecessary bandwidth usage as the connection to the remote server is limited to short periods at selected intervals
- Size of website image and web browser refresh rate are adjustable from within the program
- Motion detection option: images are stored on local disk or uploaded to remote server only when movement is detected
- Threshold and sensitivity of motion detection and interval between checks are adjustable to avoid false alerts
- User and/or other person can be notified of detected movement and/or of remote host failure by email
- If no webspace with FTP access is available the motion detection images can be sent by email
- Static motion detection images stored on the local harddisk can be "animated" to recreate movement sequence with adjustable speed
- Picture files stored on the remote server can be viewed, downloaded or deleted from within the program
- The names of the image files contain the date and the time of the movement detection allowing easy classification
- Option to manually take snapshots or make video recordings of the camera view as displayed on the monitor screen
- Configuration Wizard for quick setup of the program

Requirements:

- Webcam, digital camera or camcorder connected to PC by way of a video capture card or an USB port
- Permanent or semi-permanent Internet connection (cable, DSL,..). Dial up connections by traditional dial up modem are not supported unless the connection is made before starting the VIDIS software and maintained until after its closing.

Limitations:

- 15 days trial Vidis Pro

Description: VIDIS is a Remote Monitoring Application in software form. Its use is for security reasons and to make

## Vidis Pro Free

Vidis Pro Crack is a dedicated video surveillance application providing continuous monitoring of images from a web webcam. With the Vidis Pro For Windows 10 Crack software you can:

- Create images of the region to be monitored or selected images from an archive
- Manually take and save pictures of detected movements. You can also take snapshots of the camera view as displayed on the monitor screen
- See the time and date of the image capture in the image file name
- Send email alerts to user and/or third parties when an alert condition is met
- View images manually stored on the local harddisk and on an FTP server remotely through the Internet
- Define motion detection for time intervals from 1 to 999 minutes, up to 20 alarm thresholds and up to 20 light conditions
- Alarm on motion activation can be set up to request action from user or third parties
- Monitor with different motion detection options
- Setting thresholds and/or conditions for each alarm can be combined into one initial alarm and/or one final alarm
- Automatic image downloading after a given time interval

Configuration Wizard for quick setup

## Vidis Pro With Registration Code [2022]

□ Supports most webcams, digital cameras and camcorders connected to a video capture card or an USB port □ Continuous monitoring by uploading an image after each user specified interval (1 to 999 minutes) (\*) □ Images can be viewed in a web browser from any computer connected to the Internet □ Web browser view is automatically and periodically refreshed (selectable between 30 seconds and 10 minutes) □ Avoids unnecessary bandwidth usage as the connection to the remote server is limited to short periods at selected intervals □ Size of website image and web browser refresh rate are adjustable from within the program □ Motion detection option: images are stored on local disk or uploaded to remote server only when movement is detected □ Threshold and sensitivity of motion detection and interval between checks are adjustable to avoid false alerts □ User and/or other person can be notified of detected movement and/or of remote host failure by email □ If no webspace with FTP access is available the motion detection images can be sent by email □ Static motion detection images stored on the local harddisk can be "animated" to recreate movement sequence with adjustable speed □ Picture files stored on the remote server can be viewed, downloaded or deleted from within the program □ The names of the image files contain the date and the time of the movement detection allowing easy classification □ Option to manually take snapshots or make video recordings of the camera view as displayed on the monitor screen □ Configuration Wizard for quick setup of the program Limitations: □ 15 days trial Vidis Free Free Edition. Only a single image is displayed and/or saved. Images are only saved locally if the FTP server fails. The web browsing option does not work and the disk cannot be automatically refreshed. The program is aimed at helping novice and the technically inclined to try and capture motion in their homes to protect their property and children from intruders. It is not intended to be used for professional purposes. Vidis Free Description: □ Supports most webcams, digital cameras and camcorders connected to a video capture card or an USB port □ Continuous monitoring by uploading an image after each user specified interval (1 to 999 minutes) (\*) □ Images can be viewed in a web browser from any computer

## What's New in the Vidis Pro?

Vidis Pro is a remote video surveillance system. It allows you to monitor with a webcam, digital camera or camcorder. Images can be viewed in a web browser from any computer connected to the Internet. Vidis Pro consists of two components, a PC and a web based software application. The web based software application continuously and periodically uploads webcam images to the internet in connection with either permanent or semi permanent Internet connection. If a user is at the PC and views the web browser, the computer automatically refreshes itself. Images from the webcam can also be viewed by placing an image file in the web browser. Key features of the application: □ Software is continuously updated. Images are automatically uploaded to the web server at selected intervals. Automatic updates will automatically overwrite any previous version that is already stored on the web server □ PC will automatically refresh itself at user selected time intervals to view web browser view of images, allowing ongoing monitor of the image □ PC will automatically refresh itself at user selected time intervals to view web browser view of images, allowing ongoing monitor of the image □ User can view the PC itself and/or the webcam feed through the web browser □ Images can be viewed in a web browser from any computer connected to the Internet □ Images can be viewed through the web browser from the PC itself. No need to open the web browser □ Threshold and sensitivity of motion detection and interval between checks are adjustable to avoid false alerts □ User can be notified of detected movement and/or of remote host failure by email □ If no webspace with FTP access is available the motion detection images can be sent by email □ User can view, download or delete the camera images by means of FTP client if an FTP access connection is available □ User can make a video recording of the camera view as it is shown on the screen to preserve an exact copy of the view to allow later retrieval and detailed analysis □ Picture files stored

---

on the remote server can be viewed, downloaded or deleted from within the program □ The names of the image files contain the date and the time of the motion detection allowing easy classification □ User can manually take snapshots or make video recordings of the camera view as it is displayed on the monitor screen ◀
